DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed 2/21/01 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because the references have not been submitted on the proper forms and are photocopies of references from another application. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609 ¶ C(1).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1725

Claims 7-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fong et al. (US Pat. 5,152,976) in view of Matros et al. (US Pat. 5,366,708).

Fong et al. produces high purity hydrogen which includes partially oxidizing refinery offgas feedstock to produce a synthesis gas mixture of carbon monoxide and hydrogen, reacting the synthesis gas mixture with steam to convert the carbon monoxide into a raw gas mixture which primarily includes carbon dioxide and hydrogen, and then purifying the raw gas mixture to produce high purity hydrogen and a reject gas mixture of impurities. (abstract, figures 1-2, col. 1, lines 67-68, col. 2, lines 1-9, col. 2, lines 54-68, col. 4, lines 3-52, col. 5, lines 25-68, col. 6, lines 1-10)

Fong et al. does not teach the reversal/rearrangement of the system, or the use of valves. Matros et al. discloses an apparatus for the catalytic gaseous phase reaction of a feed gas mixture and an outlet for reacted gas and two stationary reaction zones. The reaction zones can be alternatively heated and cooled by periodically reversing the direction of flow of gas through the reactor. Oxygen may be mixed with the hydrocarbon fuel and feed gas mixture. Three way and two valves may be used in the reversal of gas flow. (abstract, figures 1-5, col. 3, lines 1-64, col. 4, lines 25-47, col. 6, lines 10-17, col. 10, lines 17-45, col. 11, lines 5-29) It would have been obvious to one of ordinary skill in the art at the time of the invention to reverse the system and use valves because this would yield a pure product because of the continually re-refinement.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See US PTO-892.
